

*Let's consider a circle*

Let's consider another  
smaller circle inside with  
a common point

Now let's assume

$a =$  Circumference of smaller circle

$b =$  Circumference of bigger circle

*Follow the point*  
 *$b/a \equiv 2$*

$$b/a = 2$$

*Follow the point*  
 *$b/a = 3$*

$$b/a = 3$$

*Follow the point*  
 *$b/a = 4$*

$$b/a = 4$$

*Follow the point*  
 *$b/a = 5$*

$$b/a = 5$$

*Follow the point*  
 *$b/a = 6$*

$$b/a = 6$$

Follow the point

$$b/a = 7$$

$$b/a = 7$$

*Thank You*
